DETAILED ACTION

Claim Objections

1. Claims 5-8 objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependant claim. See MPEP § 608.01(n). Accordingly, the claims 5-8 not been further treated on the merits.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The carrier element is inferentially included, rendering it unclear whether this is actually part of the claimed invention. It is suggested to first positively recite the element before further limiting it.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3762

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen (US 5,778,880, hereinafter "Chen").
6. In regards to claim 1, Chen discloses a wearable system comprising an electronic device (1 and 4) mounted on a carrier (3 and 22), wherein the electronic device comprises electrodes (4) shaped to fit on the carrier's receiving portion (see underside of "3").
7. In regards to claim 2, the electronic device comprises electronic means (1) operating with the electrodes (through 11), being integrated into one unit (as in Fig. 2), and arranged to be removably attached to the carrier (as in Fig. 1).
8. In regards to claim 3, the electrodes are conductive rubber (col. 2, line 31).

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3762

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

11. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chen. Chen discloses the essential features of the claimed invention except for electrodes made of conductive plastic. It is well known in the art to fabricate electrodes of conductive plastic to provide electrodes that are flexible and inexpensive to manufacture. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Chen's invention with electrodes of conductive plastic to provide the predictable results of electrodes that are flexible and inexpensive to manufacture.
